Why Color Black Their aroundear fit stays comfortable for hours, and you can move around without being tethered to your iPad, Smartphone or other Bluetooth device. You can even connect simultaneously to two devices. Controls on the ear cup let you operate certain functions of the iPad directly from the headphones and switch to take a call on your phone. Headphones charge easily with the included USB cable, and LED and audio indicators provide power, battery life and Bluetooth connection status. Color Black Amazon calculates a product's star ratings based on a machine learned model instead of a raw data average. The model takes into account factors including the age of a rating, whether the ratings are from verified purchasers, and factors that establish reviewer trustworthiness. Please try again later. First of all You can't EVER compare wired headphones to wireless bluetooth ones. The wired ones will ALWAYS sound better, especially if they're comparing them to other Bose products. http://www.awluks.pl/fck_files/a-manual-on-conservation-of-soil-and-water.xml

Simply put, the technology just doesn't exist yet, to make a bluetooth headset sound equal or better than a wired one. Second of all These headphones NEVER claim to be noise canceling. If you want complete noise canceling, then get wired ones and get some that specifically state that as a feature. These are NOT noise canceling. If you're willing to spend that much money without doing enough research, then maybe you deserve to be disappointed. Now for the actual headphones If you want wireless, these headphones are by far, the best out there. Trust me, I visited several stores and tried out Beats, Sonys, HK, Bose, and others. They ARE NOT technically noise canceling headphones, but they do minimize noise quite a bit when you're listening to music. If you want noise canceling, get the other Bose that are wired but similar price as these and you will be blown away by the sound. As far as the sound itself, these sound great, these have no discernible hiss and the sound is super clean and crisp. If you want something that emphasizes bass, then look elsewhere. These are very versatile midrange in tone and you can listen to everything from, classical to rock to electronic music and they sound very good. Be warned that they won't be as comfortable. Also people at Best Buy and the Apple store told me repeatedly that the Beats get returned all the time. Speaking of comfortable, if you want something you can wear for hours, these are unbeatable. None of the other headphones I

tried were as comfortable as these and they're super light too. The charge lasts 7 hours and the bluetooth range is about 30 feet 10 meters. And obviously as with ANY bluetooth device, it will have a hard time if it has to go through 4 super thick concrete walls, so be realistic with your expectations. Some people think these feel flimsy, but they're not. They're light, and there's a difference. The Beats Studio feel like you're wearing a motorcycle helmet. Some people confuse sturdy with heavy. <http://vico-real-estate.com/userfiles/a-manual-on-the-rites-of-umrah.xml>

These things are not flimsy, they're just light. If you want something that feels like lead, look elsewhere. HKs also sounded good, but were not as comfortable. One thing that these do that not all other bluetooth headphones do, is that they're able to connect to two devices at the same time. So if you're watching a movie on your iPad, for example, and your cell phone rings, you can answer it from the headphones. I've read the reviews of people who have trouble with these headphones when they're trying to use them with a Windows computer. I can't attest to that because I use a Mac and that's also why I use a Mac, cause I don't like having to deal with problems. I'm inclined to believe it's a compatibility problem between Windows and these headphones, so that's something to keep in mind. Overall, I am very happy with this purchase. I've had them for close to three years now and I used them every single day. The cable has not torn or worn out on me. I take care of the cable but I have had instances where I've stood up abruptly and pulled on it. As for the bluetooth aspect, it's just a tiny receiver you attach to the headphones. I've dropped it, lost it, left it inside cushions, left it charging all night, and they still work. The battery lasts after so many years about five hours for a 1.5 hr. charge. Bose recently came out with a newer and updated version but if you're tight on money, pick these up. They're just as good and will last you a long time if you take care of it. I love Bose and because of these headphones, I'll be purchasing new items from them in the future whenever this headphone finally dies. The sound quality is that which you expect from Bose. Unsurpassed. He loves the fact that they are wireless, as it keeps him from being tied to a device. We were concerned that the battery life would be an issue, but he can travel all day on a full charge. The Bluetooth allows you to be connected to two devices at once, which is a really nice feature.

He can be connected to both his phone and tablet at the same time. While these are not technically sound reducing, he does not hear any background noise while in use. The main reason we chose this particular headset was the microphone feature. We had a horrible time talking on the phone while he was in an airport. He couldn't hear me, I couldn't hear him. When using these headphones, he can hear me perfectly clear and I can hear him and not all of the background noise. They come in a drawstring storage bag. It would be nice if they had a hard case to protect during travel, but that can be purchased separately. These deliver the quality you would expect from Bose and the convenience of a wireless headset. I highly recommend! Having agonised between 2 Bluetooth headphones the Phillips Fidelio and the Bose AE2w, which I had purchased earlier. The Phillips Fidelio which had won the what Hi fi 2014 award and produces a full sound but pairing with devices, especially Apple devices is a nightmare. After many repeated attempts it finally paired with my iPhone 6 but on iPod Touch it was hit and miss and Macbook it just failed to pair. Noise isolation was also limited as it is over ears. Having debated between Bluetooth and Noise Cancelling to take on my travels. Bluetooth won out and then came the decision between sticking to Bose Quiet Comfort 25 this Bose Bluetooth which was nearly 100 pounds cheaper and the PSB M4U2. The PSB M42U had everything but the sound is bass heavy and the unit is too bulky for travelling. Been a big fan of PSB speakers but on headphones they are not there. Sound on Bluetooth is also excellent. If you are going to use this headphone without Bluetooth in case you are charging a full charge takes 3 hours and the great thing is unlike the Fidelio you can take the bluetooth module and use it as a normal pair of headphones. Great news in that it paired with Macbook 2014 and even with my old iPod classic with bluetooth Kokkia module.

Even better if you use the saving versus the noise cancelling Bose to invest in a Audio quest

Dragonfly DAC about 125 and then you have the best of both worlds. Headphone heaven with a Bluetooth and no wires and a great well nuanced sound with great comfort and value. Sorry, we failed to record your vote. Please try again Finicky and short range Bluetooth. Ugly design the Bluetooth module is like they forgot about it and added it on afterwards. The ear cups don't last but can be replaced. The outer fabric doesn't wear well over time. Expect to replace after three years or so. Sorry, we failed to record your vote. Please try again Bose should be ashamed. As you can probably guess I prefer my music delivered via 100W amplifier and floor standing speakers but impossible to bring them to live and work on assignments months at a time. These phones are the best compromise that I have found. One star is deducted because for the price, the Bluetooth device is inelligent and doesn't come with a proper case. The battery never lasted 7 hours from full charges, even after several cycles of conditioning of batteries of full charge followed by full use; tended to get about 5 hours not all at once either but two to three sessions totally 5 hours. Musical performance I would say suits easy listening and classical symphonies; Handel music for Fireworks; Brandenburg Concertos sound comfortable to listen without sibilance of cheaper phones. Rock is ok but may not suite listeners of Heavy Rock. When battery goes flat it is easy to unplug the Bluetooth gadget and use the hard wire. When wire is used, the volume tended to be louder guess stronger signal reaching the phones. Pairing and connecting to my Nokia phone was painless and worked every time with only slight time delay while reconnecting. But while pairing ok with Win7 OS HP laptop was easy, reconnecting every time always takes about 5 minutes and protracted attempts but guess that's more to do with Windows than these Bose.

Sorry, we failed to record your vote. Please try again I have recently starting streaming music with TIDAL the lossless version and felt if I am paying for that I need headphones I will hear the difference with. I have not been disappointed, straight out the box they look good and feel nice in your hands and the leather cushions on the ear pads is lovely and soft, hardly know they are on. The sound is great, clear precise, you can hear bass lines and drum riffs properly. They are not boombastic in the bass department but as other have said this is on purpose to prevent distortion in the headphone. When using them with Spotify and the bass turned up with equaliser you do get distortion, but only at extreme levels. The fact they can pair with two different devices at the same time is great as I have then linked with both my mac mini as wireless headphones in the house and can have them linked to my iphone at same time so I don't miss any call when headphones are on. Sometimes you do get what you pay for, and for me on this occasion this is one of them!! Sorry, we failed to record your vote. Please try again Excellent headphones for film watching and music listening and they are very light too. Connecting is a breeze. What I like about them is that the volume control is easy to operate and the headband can be bent open outwards at the top to allow for a more comfortable fitting. Usually I find that headphone pads are not deep enough and this causes a slight pain on the hard part of the ear after an hour or so due to the covered diaphragm slightly touching, anyway, these are borderline but I'm being picky since I only start to feel them after about an hour. All in all a great set of headphones that I can definitely recommend. Update After using these for months I can say that I am completely satisfied and my ears no longer hurt from prolonged use. Sorry, we failed to record your vote.

Please try again I'm not expect on music production but comparing it to my beats and 30 Sony headphones, you can hear notes that you couldn't previously. It really is a joy to use. With regards to the weight and tightness around the ears, they are light as feathers but at the same time doesn't feel flimsy at all. Even though the bluetooth set is on the left of the headphones, it doesn't feel off balance at all. I have to wear glasses and at no point of using them do I think they are tight, I can comfortably wear them for 8 hours without any discomfort. Situations where you might not want to wear them lying in bed, you can't roll your head around with them. Sorry, we failed to record your vote. Please try again The AE2W work without the bluetooth adapter and can be used as regular wired AE2s. One of my initial concerns was that I would be using an older model iPod Touch with

bluetooth 2.0 as the source for my music. I called into a local Bose retailer to test this out, and concerns were unfounded. I have to admit that the sound quality is fantastic over the wireless, very impressed. In addition to this, being able to pair up two devices at one time iPod and Android phone is very convenient, the iPod will pause and allow for the incoming\outgoing call when the call ends, it automatically resumes the music. Sound quality for voice calls is also extremely good. The headphones are very comfortable to wear for extended duration, I can wear these comfortably for 45 hours at a time and have no issue. I went back to the local retailer to try fitting them into the Bose Carrying Case for QuietComfort 15, and these fit without issue, even with the bluetooth adapter attached. Ill probably take it off to be on the safe side, but I have had no issues fitting it into that case. Just as an aside, Amazons delivery was very quick, arrived the day before estimated delivery date. Added bonus!Sorry, we failed to record your vote.

Please try again I would hate the reason that I am not able to use my headphones is because I forgot to charge it. Its Bose quality comes as standardSorry, we failed to record your vote. Please try again Theyre fantastic. The lightweight design makes them a joy to use. In terms of audio quality Id say theyre better than my Beats. Would highly recommend to anyone thinking of investing. The only negative is the lack of protective case, you get a pouch but this isnt really sufficient for such an expensive pair of headphones. PS Im not sure why some reviewers think they headphones are on the quiet side, I like my music loud and I havent had any issues with the volume level at all.Sorry, we failed to record your vote. Please try again When last Christmas day the price came down, I decided to give it a go. The reason I needed these was because of building work that had already been going on for several weeks downstairs, and which I knew would continue for at least a couple more months time proved me right. I needed something I could wear all day that would block out noise. I had already purchased the Plantonics backbeat pro which did an excellent job of helping me keep my sanity with additional active noise cancellation. Their only problem was the weight. Although comfortable after several hours the weight on my neck started to cause stress there, hence my search for a lightweight noise isolating headphone. I had tried several headphones, a couple by Sony, which for one reason or another did not fit the bill. I had ignored the Bose AE2W because of the price and an assumption on my part that it looked so fragile that it could no fit my purpose. I was wrong. These are the most comfortable headphones I have ever worn, and I have worn many. The weight is nominal. The cushions are large enough to go around the ears, which allow the ears to breath, and the material of which they are composed of and covered with are both super soft.

It is the ear pads themselves and the seal they provide, that in no small part, produce the very good noise isolation. The headband has no real padding under it but does not need it. Extra padding may have added weight. It feels a little flimsy there, you can feel the two thin bands in there held together it seems by the material covering the headband. Judging from the overall build of the headphones however I would guess they are anything but flimsy. They cups rotate any which way so will always sit perfectly. The build feels strong. As for the sound, for me, I would say perfect. Everything you put through comes out as it should. Vocals are clear, something that is important to me for the type of music I like, though my taste is wide ranging. Everything else is there too. These headphones will not produce sound that is not meant to be there. If a track or movie or whatever has bass for example, it will reproduce it. It will not however create it when it does does not belong in there, like so many headphones do these days. Separation is also good. I was initially disappointed with the range, using it with a wireless dongle to connect to my TV, Playstation, Xbox, I found the range to be on the limit of the standard 10m. Once out of range it would often cut out altogether. Sometimes it will reconnect automatically when back in range, but more often than not needed repairing. I found this a pain. The on off switch being almost flat, though ribbed does not help. Using it with other devices though, like my Kindle Fire and Galaxy Tab 2, I found the range to be excellent with no cutting out. The only criticism I have are regards the dongle that attaches to the audio in port for the bluetooth. It is not pretty. Bose may argue that being detachable it allows for charging

while the headphones remain useable in wired mode. It seems to me like a way to save on production costs by keeping to a standard design as in the wired version.

It would only take a small alteration to accommodate the dongle. Either way, I do not like it. Additionally, it probably contributes to my biggest and only real criticism of these headphones, the short battery life. Bose have designed a headphone that is so light and so comfortable that it can be worn all day. Ironically however, it can't be worn all day because the battery only gives six to seven hours, go figure. All in all though, if it were not for the battery life I would give these five stars. If the dongles were sold separately we could have one on charge at all times. Something for Bose to consider perhaps. Sorry, we failed to record your vote. Please try again I found the Sennheiser and Philips headphones very uncomfortable. So much so that they hurt me with prolonged use. Good sound quality, though. The Sony headphones are comfortable but had skipping issues with my Apple iPad. Sound quality not as good as the Bose. I've also tried on the Beats Studio BT but not listened to them and found them to be uncomfortable. In comparison to all the others I've tried, the Bose are by far the best for comfort. I wear them for up to a complete drain of a full charge about 7 hours and they do not hurt me at all. The sound quality is also excellent in my opinion, so much so that I am hearing things I've not heard before. No problems with connectivity either. The one downside with the Bose is that a full charge only lasts about 7 hours. They recharge in under 2 hours. Timings v approx! Bluetooth headphones are where it's at and are a joy to use. The Bose ones are the best I've found and I'm seriously considering buying another pair to supplement the pair I've got. Highly recommended and reasonably priced in comparison with the others referred to. Sorry, we failed to record your vote.

Please try again The sound quality is brilliant, they are so light weight unbelievable, I wear them all day in the office so comfortable on the ear, and almost noise cancelling I can't hear people around me at all, when I am working, that was the purpose I bought them, the battery is very good for now, I hope it doesn't degrade over time too much. The overall product is brilliant, and the service was great the postage was fairly quick. Would recommend the seller and the product. I am absolutely in love with these headphones, I love the fact that I don't have to have tangled wire when I am on the go, the sound quality is brilliant, they are so light weight unbelievable, I wear them all day so comfortable on ear, the battery is very good for now, I hope it doesn't degrade over time too much. Sorry, we failed to record your vote. Please try again It cuts in and out. The battery life isn't huge either but it's not every day I want to listen to music for 8 hours in a row, and it's a universal cable so it's not a pain to keep a cable on you. Sorry, we failed to record your vote. Please try again I saw the price to increase and decrease almost every month, then I decided to buy them. I absolutely love them they have the quality of Bose and the sound is crystal clear especially for someone who loves the music so much. There are bluetooth but they are giving you the choice to use them with the cord plus a nice black pouch is coming with them. Sorry, we failed to record your vote. Please try again I particularly like the option of making this wired as well as wireless Sound is good and I don't have the problem with poor bass that other people do. It is comfortable and lightweight and the multifunction button makes play and pause easy to control The only problem I had is a cracking that I experience in bluetooth mode to my laptop, but that was resolved with a bluetooth driver update on my laptop and had nothing to do with the Bose Headphones. Sorry, we failed to record your vote.

Please try again In order to navigate out of this carousel please use your heading shortcut key to navigate to the next or previous heading. One of the best parts of using a Bose Headset is the Bluetooth capability. With Bluetooth, you connect a device by pairing it wirelessly with a source; you do not need a cord to make the connection. Pairing connects other Bluetooth devices with your Bose headset, but first, you must turn on pairing mode. Here is how. Manually Turning on Pairing in Your Bose Headset To pair your Bose headset with a Bluetooth-enabled device Turn the headset upside down so that you are looking at the bottom of the headset. Move the power switch to the On position

to turn on the headset. Move the headset close to the Bluetooth-enabled device that you want to pair it with so it can be discovered. The second device must also be powered on. Press and hold the call button or another button specified in the instructions for your specific device on your headset for about five seconds to put the headset into discoverable mode. You will see a slowblinking indicator light. From the second devices Bluetooth device list, choose the option for the name of the Bose device you are pairing. If the device name does not up, go back to the Bose device and repeat the steps to get it to show up. After you select the device, you may be prompted to enter a password or to confirm to accept the connection. If you are asked for a password, Bose says to type in 0000 and then press OK. When the pairing has completed the connection, the Bluetooth indicator light flashes again and turns a solid color. Ten seconds after the pairing is complete, the light turns off. Turning on Pairing Mode With Bose Connect App In addition to manually pairing your Bose headset with a Bluetooth-enabled device, you can use the Bose Connect app to turn on pairing mode. The Bose app manages the Bluetooth settings for multiple Bose devices.

To pair your Bose headset with the Connect App If you have not already, download the Bose Connect app from the iOS App Store or Google Play. Open the app and go to the Connections section. If this is your first time connecting, click the Connect New option. On your headset, make sure the power light is on and that you held down the Call button to turn on pairing mode. Your device should now show up on the Bose Connect app. Select it by its name. Once the device is connected, the indicator light blinks for two seconds, and the app reports that it is Connected to Name of the Device. If you need to disconnect your device, you can do so from the app, and if you choose to reconnect it later, locate your devices name in the app under the Connections subcategory History. There, devices that were previously connected are available to reconnect. When Bose Headset Does Not Pair in Connect If your wireless headset does not show up in the Bose Connect app, confirm that the headset is on and try again. If that does not work, reboot the device. You can also try closing and reopening the Connect app, and if you are on Android, enable location services or clear the apps cache to reset the apps settings and, hopefully, fix the problem. Bose QuietComfort 35 Not Pairing Certain headsets, such as the QuietComfort 35 wireless headphones, sometimes have issues struggling to connect. If you find your Bose QuietComfort 35 not pairing, clear the Bluetooth list on both your headset and the Bluetooth devices you are trying to connect with. To clear this pairing list, slide the power switch of the headset to the Bluetooth symbol and hold it for 10 seconds. You should hear Bluetooth Device List Cleared. Then, do the same on the Bluetooth connected device and delete the QuietComfort 35 name from the devices Bluetooth list. That should solve any issues of Bose QuietComfort 35 not pairing.

Bose SoundLink Speaker Not Pairing While it is not a headset, you might find that your Bose SoundLink speakers have trouble pairing too. If this happens, reset Bose SoundLink and the Bose SoundLink app. To do so Hold the Mute button down on your SoundLink speakers for 10 seconds until the LED lights flash. Press the Power button to turn the SoundLink back on. Clear the pairing list on both the Bose SoundLink speakers and the Bluetooth device you were trying to connect to. To reset the Bose SoundLink pairing lists, hold down the Bluetooth button for 10 seconds. A tone sounds when it is done, indicating you cleared all Bluetooth devices from the speakers memory. Try to pair the device again. To make your speakers discoverable, hold down the Bluetooth button for three seconds. This light blinks on and off about once per second, which is how you know that pairing mode is on. Now, connect to the speakers from your Bluetooth-enabled device, and your device should be paired. References Bose Pairing the Headset With Your Device Bose My Headphones Will Not Pair With My Bluetooth Device About the Author Grant Harvey is a writer with experience in the tech and crowdfunding space. [Click here](#) for more information on the types of cookies we use and how to change your cookie settings. Music makes you feel free. Wires shouldn't get in the way of that. With clear calls in any environment, durable materials and a comfortable fit, you can experience wireless freedom. And uncompromised performance. It doesnt facilitate pairing.

Please use pairing instructions for phones that are not NFC enabled. Low volume Listening handsfree at work. Get consistent performance at lower volumes. High volume Turning it up for your commute. Your music gets deep, immersive sound when you want it loud. These are designed to optimise communication at both ends. And with enhanced sidetone, you'll sound as natural as if you weren't wearing headphones.

Get tips, unlock product features and personalise your settings, so you can spend more time enjoying the music instead of setting it up. Go from taking a call on your smartphone to listening to music on your tablet to watching a movie on your laptop, with a single swipe. With impactresistant materials, glassfilled nylon and corrosionresistant stainless steel, these are engineered to survive life on the go. Their superior comfort means theyre built for allday listening, too. The softcushion earcups provide a comfortable aroundear fit. The quality of it, crisp, with enough bass and mids that balance perfectly with the voice. If there is a word to describe this it would be Natural. The built quality, in this case, is not as premium as some other higher ranked headphones, but yes, they are worth every penny. The downside for many people is that these are not ANC like the more expensive Quietcomfort Line, which would have make these perfect. But after testing them and listening to them, soon I realized that no ANC is needed. You can still enjoy music, listen to calls and deliver a good call quality when required without worrying about picking up ambient noises. In other words, no ANC is needed with the Soundlink II. Ear sweat or wearing fatigue is not an issue either. This device is so lightweight and well designed that sometimes I just forget that I have them on. If you take care of them they will last. Still working well, only the battery doesnt stay charged as long. However, it still recharges quickly though so I have never had it run completely out. My ears get bothered by sound cancelling headphones but these babies do the trick and I use them regularly. I did have to replace the ear cup on them about a year or so ago and found a less expensive but sufficient quality ear pad that fit them well. Definitely worth the money. When an NFCenabled device, such as a smartphone, is placed near the right earcup of the headphones, it pairs them to the device via Bluetooth.
